Subject: Acceptance of EASA STC 10014046, Installation of MTV-16-1-E-C-F-R(P)/CFR250-55 Propeller on Textron 208/208B Aircraft

This is in response to EASA letter dated 15 September 2022, requesting Transport Canada approval of EASA STC 10014046.

In accordance with our current policy associated with the review of foreign STCs, some STCs applicable to certain categories of aircraft may be accepted solely on the basis of their foreign certification, and do not require the issue of a corresponding certificate by Transport Canada. STC 10014046 falls within these criteria.

This STC will be entered in the national index of STCs that have been reviewed and accepted by Transport Canada for installation on Canadian registered aeronautical products.

This letter confirms formal acceptance of STC 10014046 by Transport Canada. This acceptance reflects the models applicable at the time of application. The addition of models to STC 10014046 constitutes a change and application is required to revise the Transport Canada acceptance record.

Respectfully,

DocuSigned by:
